

**What is claimed is:**

1. A thumbnail size flash memory card connector comprising a lengthwise insulator, a reverse U-shaped moveable cover, and a plurality of connecting terminals, wherein:
  - 5      sidewalls on left and right sides of the insulator assume a non-mutually symmetrical structure, wherein a front-end of the sidewall having slightly thicker wall thickness is configured to form a wedge-shaped gap, moreover, a slide groove is respectively defined in each surface of an outer wall of the left sidewall and the right sidewall;
  - 10     the reverse U-shaped moveable cover is provided with a cover panel and side panels configured on left and right sides of the cover panel, and blocking pieces are configured by punch molding each surface of the side panels of the moveable cover, and press-fit strips are configured on two sides of a surface of the cover panel by punch molding thereon; furthermore, the blocking pieces on the two side panels of the moveable cover lodge into slide grooves configured in left and right sides of the left and right sidewalls of the insulator respectively; and the connecting terminals, which lodge into the insulator and secure placement therein.
  - 15     2. The thumbnail size flash memory card connector according to claim

1, wherein tabs are further configured by punch molding each surface of the side panels of the moveable cover.
